What is Powdercoating

Frames go through a multi stage pre-treatment process to remove oil and chemically prepare frame prior to spray application of dry powder which is electrostatically applied then cured at over 200°C. Powder coating produces a high specification coating which is relatively hard, abrasion resistant and tough

Upholstery

Upholstery

Designed upholstery for better ergonomics

Our smart form pads are strategically shaped to deliver greater comfort and stability. If a pad is too soft it will wear, distort prematurely and cause users discomfort.

Utilising superior grade sanitised cloths that are abrasion resistant, thoroughly coloured, fungus and bacteria proof, skin and body compatible out lasting traditional upholstery and meeting relevant flammability standards. Cloth is double stitched to fit exactly the 10lb 38mm fire retardant foam a composition we have perfected over time and 18mm plywood boards, cloth is sewn into box structures to avoid folding at corners. Pads are anchored with 8mm t-nuts bolted to the machine framework for easy replacement. Also complete with replaceable Velcro fitted wear covers (with club branding option) on high fatigue areas and backing boards to hide staples.
